

Postdoctoral position
MicroRNA and male fertility preservation

The Research Laboratory in Human Reproduction and the Laboratory of Physiology and Pharmacology are two research laboratories within the Faculty of Medicine at the Université libre de Bruxelles, located at campus Erasme, Brussels, Belgium. Dr Isabelle Demeestere and Dr Pascale Lybaert share a common interest in several aspects of the biology of reproduction and developed a collaborative project focused on fertility preservation in cancer patients. The Research Laboratory in Human Reproduction is part of the ULB-Cancer Research Center gathering 21 research groups working together to develop high standard, cutting edge, interdisciplinary cancer research (<http://ucrc.ulb.be/research-groups-pages/research-laboratory-in-human-reproduction-ulb.html>).

This new project is seeking a highly motivated Post-Doctoral candidate interested in microRNA and male fertility preservation.

Qualifications:

The ideal candidate will be an enthusiast and independent doctoral graduate with experience in reproductive biology and/or miRNA, motivated to apply for an Individual Fellowship (European postdoctoral program: <https://if-at-ulb.ulb.be>) at ULB under the supervision of Dr Pascale Lybaert and Dr Isabelle Demeestere.

Candidates should hold a master degree in Biomedical or Medical Sciences, Biology or Molecular Biology, and have a PhD degree in reproduction field (basic sciences).

Interested candidates should send a cover letter, CV and contact information to Pascale Lybaert (plybaert@ulb.ac.be) before August 15, 2019 .
